DETAILED ACTION

1. This office action is in response to the Amendment filed on September 9, 2009, in which claims 1-4, 9, and 14-20 are presented for further examination.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ramraj Soundararajan (Reg. No. 53,832) on December 16, 2010.

The application has been amended as follows:

In The Claim(s):

20. (Previously Presented) The article of manufacture of claim ~~1~~ **9**, wherein encoding lengths are selected based on statistics defining a maximum number of descendants associated with any given node.

Allowable Subject Matter

3. The present application has been thoroughly reviewed. Upon searching a variety of databases, the examiner respectfully submits that claims 1-4, 9, and 14-20 are allowable in light of the Applicant's arguments and in light of the prior art made of record.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance: The present invention relates to self-adaptive prefix encoding of stable node identifiers. The closest prior art, Lentini (US PG. Pub. No. 2003/0088639) is directed to a method and apparatus for fast retrieval of data stored in a dense memory element containing a submitted key for data search; Bowman (US PG. Pub. No. 2004/0111672) is directed to systems and methods for the exchange of collaborative information from various related content sources; O'Neil (US Pat. No. 6,889,226) is directed to a method of storing hierarchically-organized data, such as extensible Markup Language (XML) data, in a non-hierarchical data structure such as a relation; Hu (US Pat. No. 7,274,671) is directed to compression of data; and, Farrell (US PG. Pub. No. 20050192955) is directed to graph algorithms to, automate organizing related search results. Neither Lentini, Bowman, O'Neil, HU, nor Farrell, alone or in combination, anticipate or render obvious the recited features "c. sequentially encoding each local identifier other than said root node in hexadecimal notation starting with an initial hexadecimal value and incrementing the initial hexadecimal value by said initial base length, d. adaptively extending said initial base length by at least one additional byte upon exhausting all incremental hexadecimal values based on said initial base length". These features, in conjunction with all other limitations of the dependent and independent claims render claims 1-4, 9, and 14-20 allowable.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
